

**AMENDMENTS TO THE CLAIMS**

Upon entry of this amendment, the following listing of claims will replace all prior versions and listings of claims in the pending application.

Please amend the claims as follows:

1-64 (canceled)

65. (previously presented) A modular display system comprising:

a base assembly;

a first support arm, operably coupled to said base assembly;

a second support arm secured to said first support arm and having at least a pair of coupling assemblies for securing to portions of first and second display panels;

a third support arm secured to said first support arm and having at least one coupling assembly for supporting a third display panel on said third support arm;

a column coupling assembly on the base assembly to operably couple the first support arm thereto; and

at least two coupling assemblies on the first arm to couple the second support arm and the third support arm, wherein the column coupling assembly and the coupling assemblies on the first, second and third support arms are substantially identical, and wherein said third support arm may be readily detached from said first support arm to enable said display system to be modularly configured to support two display panels and modularly configured to support three or more display panels.

66. (previously presented) A modular display system comprising:

a base assembly;

a first support arm, operably coupled to said base assembly;

a second support arm secured to said first support arm and having at least a pair of coupling assemblies for securing to portions of first and second display panels; and

a third support arm secured to said first support arm and having at least one coupling assembly for supporting a third display panel on said third support arm, wherein said third

support arm may be readily detached from said first support arm to enable said display system to be modularly configured to support two display panels and modularly configured to support three or more display panels, and wherein the display system is modularly configurable to support two side-by-side display panels, modularly configurable to support two vertically stacked display panels, modularly configurable to support three display panels in a pyramid shape, modularly configurable to support three display panels in an inverted pyramid shape, and modularly configurable to support two horizontal display panels above two horizontal display panels.

67. (previously presented) The display system of claim 66, wherein at least one display panel can assume a landscape orientation and a portrait orientation.

68-74 (canceled)

75. (previously presented) A modular support system for display panels, the system comprising:

a base structure;

a first support arm removably attachable to the base structure;

a second support arm removably attachable to the first support arm for supporting display panels;

a third support arm removably attachable to the first support arm for supporting display panels; three coupling assemblies on the first support arm; and

three coupling assemblies on the second support arm;

wherein:

a) the modular support system is configurable as a one-support arm system having the first support arm, a two-support arm system having the first and second support arms, and a three-support arm system having the first, second and third support arms,

b) in the one-support arm system, the first support arm can support at least two display panels,

c) in the one-support arm system, the first support arm can support two display panels in either landscape orientation, using one pair of the three coupling assemblies of the first support arm, or portrait orientation, using another pair of the three coupling assemblies of the first support arm, and

d) in the two-support arm system, the second support arm can support two display panels in either landscape orientation, using one pair of the three coupling assemblies of the second support arm, or portrait orientation, using another pair of the three coupling assemblies of the second support arm.

76. (previously presented) A modular support system for display panels, the system comprising:

a base structure;

a first support arm removably attachable to the base structure;

a second support arm removably attachable to the first support arm for supporting display panels;

a third support arm removably attachable to the first support arm for supporting display panels; three coupling assemblies on the first support arm;

three coupling assemblies on the second support arm; and

three coupling assemblies on the third support arm;

wherein,

a) the modular support system is configurable as a one-support arm system having the first support arm, as a two-support arm system having the first and second support arms, and as a three-support arm system having the first, second and third support arms;

b) in the one-support arm system, the first support arm can support at least two display panels;<sup>35</sup>

c) in the one-support arm system, the first support arm can support two display panels in either landscape orientation, using one pair of the three coupling assemblies of the first support arm, or portrait orientation, using another pair of the three coupling assemblies of the first support arm,

d) in the two-support arm system, the second support arm can support two display panels in either the landscape orientation, using one pair of the three coupling assemblies of the second support arm, or portrait orientation, using another pair of the three coupling assemblies of the second support arm, and

e) in the three-support arm system,

- i) the second support arm can support two display panels in either landscape orientation, using one pair of the three coupling assemblies of the second support arm, or portrait orientation, using another pair of the three coupling assemblies of the second support arm, and
- ii) the third support arm can support two display panels in either the landscape orientation, using one pair of the three coupling assemblies of the third support arm, or portrait orientation, using another pair of the three coupling assemblies of the third support arm.

77-79 (canceled)

80-84 (canceled)

85. (previously presented) A modular display system comprising:  
a base assembly;  
a first support arm, operably coupled to said base assembly;  
a second support arm secured to said first support arm and having at least one pair of coupling assemblies for securing to portions of first and second display panels;  
a third support arm secured to said first support arm and having at least one coupling assembly for supporting a third display panel on said third support arm, wherein said third support arm may be readily detached from said first support arm to enable said display system to be modularly configured to support two display panels and modularly configured to support three or more display panels, and wherein the display system is modularly configurable to support three display panels in a pyramid shape and modularly configurable to support three display panels in an inverted pyramid shape.

86. (previously presented) The system of claim 85, wherein at least one display panel can assume a landscape orientation and a portrait orientation.

87. (previously presented) The system of claim 85, wherein the base assembly is designed to rest on a work surface.

88. (previously presented) The system of claim 85, wherein the at least one pair of coupling assemblies secure the rears of the first and second display panels to the second support arm.

89. (previously presented) The system of claim 85, wherein the second support arm is integral and the third support arm is integral.

90. (canceled)

91. (previously presented) A modular support system for display panels, the system comprising:

a base structure;

a first support arm removably attachable to the base structure;

a second support arm removably attachable to the first support arm for supporting display panels;

a third support arm removably attachable to the first support arm for supporting display panels; and

two coupling assemblies for the second support arm to couple two display panels thereto;

wherein:

a) the modular support system is configurable as a one-support arm system having the first support arm, a two-support arm system having the first and second support arms, and a three-support arm system having the first, second and third support arms,

b) in the one-support arm system, the first support arm can support at least two display panels, at least one in either landscape orientation or portrait orientation, using the two coupling assemblies for the first support arm, and

c) in the two-support arm system, the second support arm can support two display panels, in either landscape or portrait orientations, using the coupling assemblies of the second support arm.

92. (previously presented) The system of claim 91, wherein the base structure is designed to rest on a work surface.

93. (previously presented) The system of claim 91, wherein the two coupling assemblies for the second support arm to couple two display panels thereto couple the rears of the two display panels to the second support arm.

94. (previously presented) The system of claim 91, wherein the second support arm is integral and the third support arm is integral.

95. (previously presented) A modular support system for display panels, the system comprising:

a base structure;

a first support arm removably attachable to the base structure;

a second support arm removably attachable to the first support arm for supporting display panels;

a third support arm removably attachable to the first support arm for supporting display panels; two coupling assemblies for the first support arm to couple two display panels thereto; two coupling assemblies for the second support arm to couple two display panels thereto; and two coupling assemblies for the third support arm to couple two display panels thereto; wherein,

a) the modular support system is configurable as a one-support arm system having the first support arm, as a two-support arm system having the first and second support arms, and as a three-support arm system having the first, second and third support arms,

b) in the one-support arm system, the first support arm can support at least two display panels, at least one in either landscape orientation or portrait orientation, using the two coupling assemblies for the first support arm,

c) in the two-support arm system, the second support arm can support two display panels, in either landscape orientation or portrait orientation, using the two coupling assemblies for the second support arm, and

d) in the three-support arm system,

i) the second support arm can support two display panels, and

ii) the third support arm can support two display panels, in either landscape orientation or portrait orientation, using the two coupling assemblies for the third support arm.

96. (previously presented) The system of claim 95, wherein the base structure is designed to rest on a work surface.

97. (previously presented) The system of claim 95, wherein the two coupling assemblies for the second support arm to couple two display panels thereto couple the rears of the two display panels to the second support arm.

98. (previously presented) The system of claim 95, wherein the second support arm is integral and the third support arm is integral.

99. (previously presented) The system of claim 65, further comprising the first, the second and the third display panels.

100. (previously presented) The system of claim 99, wherein the first, the second and the third display panels are liquid crystal display panels.

101. (previously presented) The system of claim 66, further comprising the first, the second and the third display panels.

102. (previously presented) The system of claim 101, wherein the first, the second and the third display panels are liquid crystal display panels.

103. (previously presented) The system of claim 75, further comprising at least three display panels.

104. (previously presented) The system of claim 103, wherein the at least three display panels are liquid crystal display panels.

105 (previously presented) The system of claim 76, further comprising at least three display panels.

106. (previously presented) The system of claim 105, wherein the at least three display panels are liquid crystal display panels.

107. (canceled)

108. (previously presented) The system of claim 90, wherein the first, second and third display panels are liquid crystal display panels.

109. (previously presented) The system of claim 91, further comprising at least three display panels.

110. (previously presented) The system of claim 109, wherein the at least three display panels are liquid crystal display panels.

111. (previously presented) The system of claim 95, further comprising at least three display panels.

112. (previously presented) The system of claim 111, wherein the at least three display panels are liquid crystal display panels.

113. (new) A modular display system comprising:  
a first display panel;  
a second display panel;  
a third display panel;  
a base assembly;  
a first support arm, operably coupled to said base assembly;  
a second support arm secured to said first support arm and having at least one pair of coupling assemblies for securing to portions of the first and second display panels;  
a third support arm secured to said first support arm and having at least one coupling assembly for supporting the third display panel on said third support arm, wherein said third support arm may be readily detached from said first support arm to enable said display system to be modularly configured to support two display panels and modularly configured to support three or more display panels, and wherein the display system is modularly configurable to support the three display panels in a pyramid shape and modularly configurable to support the three display panels in an inverted pyramid shape.

114. (new) The system of claim 113, wherein at least one display panel can assume a landscape orientation and a portrait orientation.

115. (new) The system of claim 113, wherein the base assembly is designed to rest on a work surface.

116. (new) The system of claim 113, wherein the at least one pair of coupling assemblies secure the rears of the first and second display panels to the second support arm.

117. (new) The system of claim 113, wherein the second support arm is integral and the third support arm is integral.
